

JONATHAN REYES

LEAD SOFTWARE ENGINEER

Fort Worth, TX — Remote (US) | (469) 350-8666 | jreyes.me@protonmail.com | linkedin.com/in/reyesjon/

Lead Software Engineer with 11+ years of experience building distributed systems, APIs, and developer platforms within regulated environments. Lead architecture and delivery for Capital One's external dealership-partner platform, following ownership of enterprise Artifactory infrastructure and external-facing lending APIs. Combine Java, Python, and AWS expertise with strengths in microservices, AI-enabled engineering, platform reliability, and secure system design. Author and maintainer of boost, an open-source package manager for AI skills.

CORE EXPERTISE

Distributed Systems Architecture | Cloud-Native Application Development | Microservices & API Design | Technical Leadership | AWS Platform Engineering | Event-Driven Architecture | Generative AI & LLM Solutions | DevOps & CI/CD Automation | Production Operations & Incident Management | Data Security & Regulatory Compliance | Developer Platform Engineering | Mentorship

Technical Skills:

Languages & Frameworks: Java (Spring Boot), Python (Flask), SQL, Bash

Cloud & Infrastructure: AWS (ECS, Lambda, Step Functions, EventBridge, API Gateway, DynamoDB, Aurora, Textract, Bedrock), IAM, Docker, Kubernetes, OpenShift, Terraform, Linux

AI & Automation: Claude Code, Windsurf, MCP integrations, prompt engineering, LLM evaluation (ragas, golden-set evals), LangChain (RAG), document intelligence

Platform & Delivery: Artifactory, CI/CD, Netflix Conductor, OpenTelemetry, CloudWatch, New Relic, Prometheus, Splunk, PagerDuty

APIs & Data: REST API design & versioning, microservices, Kafka, SQS, PostgreSQL, Oracle, relational design

PROFESSIONAL EXPERIENCE

Lead Software Engineer | CAPITAL ONE – Plano, TX (Remote) (February 2023 – Present)

- Lead architecture, technical direction, and delivery for the AWS microservices platform, orchestrating all communications with external dealership partners using ECS, API Gateway, SQS, Kafka, Docker, PostgreSQL, and Oracle.
- Spearhead a zero-loss migration of a stateful distributed system between AWS accounts, traffic-splitting live workloads across coupled Spring Boot streams, Oracle, PostgreSQL, SQS, and Kafka under tight SLAs without dropping a request.
- Built an AWS Textract document-intelligence pipeline that extracts structured findings from partner documents and replaces manual analyst review.
- Support PCI, NPI, and model-risk reviews through tokenization and masking, and re-architected the platform's LLM solution after data classification surfaced confidential data, evolving from Textract to AWS Bedrock and self-hosted vLLM with Llama and production golden-set evaluations.
- Designed event-driven pipelines in which EventBridge rules trigger Step Functions that orchestrate AWS Batch jobs over S3 file drops, with companion state machines verifying downstream delivery and raising alarms.
- Apply AI-assisted engineering daily through Claude Code, Windsurf, and MCP integrations across Jira, Confluence, and GitHub and prototyped a LangChain RAG developer-enablement tool that generated adoption requests across teams.
- Own end-to-end production operations, including on-call support, incident triage, and root-cause analysis, using OpenTelemetry and CloudWatch for observability.
- Serve as Testing Champion for the Sales organization, with standards adopted across four teams.
- Mentor engineers and conduct coding and system-design interviews, and earned two ACE Awards in 2024 and 2025, and the Diamond Dealer Award in 2024.

Principal Associate Software Engineer, Prequalified Applications | CAPITAL ONE – Plano, TX (Remote) (June 2021 – February 2023)

- Architected and operated external-facing auto-loan prequalification services, including API contracts and versioning, data models, AWS deployment, and production support, while partnering with product and risk teams to meet regulated lending requirements.

Principal Associate Software Engineer, Artifactory Platform & Metrics | CAPITAL ONE – Plano, TX (June 2019 – June 2021)

- Managed the company-wide JFrog Artifactory ecosystem using Terraform, automated artifact promotion with AWS Lambda and DynamoDB to eliminate an enterprise-wide manual release step, and delivered performance analytics pipelines feeding machine-learning models.

Software Engineer II | IBM – Dallas, TX (June 2017 – June 2019)

- Built OpenShift and Kubernetes deployments for microservices and migrated provisioning to Netflix Conductor, converting sequential scheduling to parallel processing and reducing large-data processing time from hours to minutes.

Early Career Experience: **Software Engineer I | SoftLayer, Acquired by IBM – Dallas, TX**

Open-Source Project:

boost – AI Skills Package Manager, Author & Maintainer (2025 – Present) – github.com/jonnyeclectic/boost

- Develop and maintain a dependency-free, 72-command Python CLI with its own MCP server that installs and version-locks agent skills into Claude Code, Windsurf, and Cursor and indexes more than 10,000 publicly available skills.
- Maintain an LLM evaluation harness covering recall@k, MRR, nDCG@k, Ragas faithfulness, and statistical-significance testing, with evaluation requirements enforced through CI gates

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Science in Computer Science, Minor in Mathematics | University of North Texas

Training, Certifications, & Licenses: **AWS Certified Solutions Architect – Associate (2025)**
