SUMMARY

Lead software engineer with 11 years building distributed systems, APIs, and developer platforms in regulated financial services. At Capital One, lead architecture for a high-throughput platform orchestrating communications with external dealership partners, and previously ran the platform ecosystem around the company-wide JFrog Artifactory binary repository. Owned external-facing lending APIs end to end. Author and maintainer of boost, an independent open-source package manager for AI coding skills. Java and Python on AWS, with a record of setting standards that spread beyond team boundaries.

EXPERIENCE

Capital One — Plano, TX

June 2019 – Present

Lead Software Engineer

Feb 2023 – Present

- Built an internal AI developer tool adopted by thousands of engineers company-wide: a Python CLI packaging reusable AI capabilities into installable, versioned components wired into engineers' AI agents; daily practitioner of AI-assisted engineering (Claude).
- Lead architecture, technical direction, and delivery for a high-throughput platform orchestrating communications with external dealership partners, built on AWS microservices (Docker, SQS, Kafka, Postgres, ECS).
- Built a document-intelligence pipeline using AWS Textract that extracts structured findings from unstructured partner documents, replacing manual review for analyst teams.
- Own production operations end to end: on-call, incident triage, root-cause investigation, monitoring and alerting.
- Serve as Sales Testing Champion, defining test strategy and quality standards adopted across four engineering teams; mentor engineers and lead cross-functional delivery from scoping through production.

Principal Associate Software Engineer, Prequalified Applications

June 2021 – Feb 2023

- Architected and operated external-facing services powering auto loan prequalification for public applicants, owning API contracts, data models, AWS deployment, and production support end to end.
- Partnered with product and risk stakeholders to translate regulated lending requirements into resilient, scalable service architecture.

Principal Associate Software Engineer, Artifactory Platform

Jan 2020 – June 2021

- Built and maintained the platform ecosystem around JFrog Artifactory, the company-wide binary repository.
- Automated artifact promotion within production deployment pipelines, eliminating a manual release step for engineering teams across the company.

Principal Associate Software Engineer, Metrics

June 2019 – Jan 2020

- Delivered platform-agnostic performance analytics through clustered cloud microservices; automated metrics aggregation feeding machine learning models driving application performance and resilience.

IBM — Dallas, TX

2015 – 2019

Software Engineer II

2017 – 2019

- Built OpenShift deployments for microservices; migrated server provisioning to Netflix Conductor workflow orchestration, converting sequential job scheduling to parallel execution and cutting large-data processing from hours to minutes.

Software Engineer I (SoftLayer, acquired by IBM)

2015 – 2017

- Developed APIs for globally integrated services; built Splunk dashboards for service metrics and health checks and contributed to the CI/CD functional test framework.

TECHNOLOGIES

Languages & Frameworks: Python, Flask, Java, Spring Boot, SQL, Bash

Cloud & Infrastructure: AWS (ECS, SQS, Aurora, Textract) — Certified Solutions Architect

AI & Automation: AI-assisted engineering (Claude), LLM and agent tooling, document intelligence, metrics-to-ML pipelines

Platform & Delivery: JFrog Artifactory, CI/CD pipelines, test strategy and automation, workflow orchestration (Netflix Conductor), Splunk

APIs & Data: API design and versioning, microservices, messaging systems, PostgreSQL, Oracle, relational design

EDUCATION

BS, Computer Science — University of North Texas

2011 – 2015

Minor in Mathematics | Certificates: Technical Communication, Game Programming
