SUMMARY

Lead software engineer with 11 years designing, building, and operating distributed systems, APIs, and developer platforms in regulated financial services. At Capital One, lead architecture for a high-throughput partner integration platform and built an internal AI developer tool adopted by thousands of engineers. Author and maintainer of boost, an independent open-source package manager for AI coding skills. Java and Python on AWS, with a record of setting standards that spread beyond team boundaries.

EXPERIENCE

Capital One — Plano, TX

June 2019 – Present

Lead Software Engineer

Feb 2023 – Present

- Lead architecture, technical direction, and delivery for the platform orchestrating all communications with external dealership partners, processing auto loan applications at 10,000 per hour on AWS microservices (ECS, Docker, SQS, Kafka, PostgreSQL, Oracle).
- Led a zero-loss migration of a highly stateful distributed system, three coupled Spring Boot streams consuming and producing across Oracle, PostgreSQL, SQS, and Kafka, between AWS accounts under tight SLAs without dropping or duplicating a request.
- Built an internal AI developer tool adopted by thousands of engineers company-wide: a Python CLI that packages reusable AI skills into versioned, installable components wired directly into Claude Code.
- Practice AI-assisted engineering daily with Claude Code and Windsurf, using MCP integrations across Jira, Confluence, and GitHub; trained leaders and engineers on Windsurf workflows that backfill functional tests for compliance requirements, driving team adoption and contributing improvements upstream.
- Shipped a document-intelligence pipeline on AWS Textract that extracts structured findings from unstructured partner documents, replacing manual review and projected to save analyst teams ~1 week of report analysis per month.
- Support PCI, NPI, and model-risk reviews: classify sensitive data, confirm violations, and remediate via tokenization and masking; re-architected an LLM solution after data classification surfaced highly confidential information.
- Own production operations: on-call, incident management, root-cause analysis, monitoring, alerting, and observability.
- Serve as Testing Champion for the Sales organization (one designated engineer per org): run office hours helping teams establish testing frameworks, meet new-feature test thresholds, and migrate systems; report posture to leadership; standards adopted across four teams.
- Mentor engineers, serve as a technical interviewer for coding and system design with consensus hiring votes, and lead cross-functional delivery from scoping through production.
- Recognized with two ACE Awards for Technical Engineering Excellence (2024, 2025) and the Diamond Dealer Award (2024).

Principal Associate Software Engineer — Prequalified Applications

June 2021 – Feb 2023

- Architected and operated external-facing services powering auto loan prequalification for public applicants, owning API contracts and versioning, data models, AWS deployment, and production support.

Principal Associate Software Engineer — Artifactory Platform & Metrics

June 2019 – June 2021

- Ran the platform ecosystem around JFrog Artifactory, the company-wide binary repository (services deployed via Terraform); automated artifact promotion in production deployment pipelines, eliminating a manual release step for engineering teams across the enterprise.
- Delivered performance-analytics microservices and automated metrics pipelines feeding machine learning models.

IBM — Dallas, TX

2015 – 2019

Software Engineer II

2017 – 2019

- Built OpenShift (Kubernetes) deployments for microservices; migrated server provisioning to Netflix Conductor workflow orchestration, converting sequential job scheduling to parallel execution and cutting large-data processing from hours to minutes.

Software Engineer I — SoftLayer (acquired by IBM)

2015 – 2017

- Developed APIs for globally integrated services; built Splunk health dashboards and contributed CI/CD functional tests.

OPEN SOURCE

boost (github.com/jonnyeclectic/boost) — Author and maintainer. Open-source package manager for AI coding skills: a 72-command, dependency-free Python CLI with its own MCP server that installs and version-locks agent skills into Claude Code, Windsurf, and Cursor; hundreds of installs, with CI-enforced 80% line-coverage and mutation-testing gates.

SKILLS

Languages & Frameworks: Java (Spring Boot), Python (Flask), SQL

Cloud & Infrastructure: AWS (ECS, SQS, Aurora, Textract), Docker, CI/CD pipelines

AI Dev Tools: Claude Code, Windsurf, Cursor, MCP integrations, agent skill packaging

Data & APIs: PostgreSQL, Oracle, Kafka, REST API design and versioning, microservices

EDUCATION & CERTIFICATION

BS, Computer Science, Minor in Mathematics — University of North Texas

2015

AWS Certified Solutions Architect – Associate

2025
